## 1. Introduzione

In questo documento sono riportati i risultati delle test suite eseguite in base ai test cases definiti nel documento “Nefrapp\_TCS\_Vers.0.7”.

I test di sistema sono stati eseguiti con “Katalon Studio” attraverso il web browser “”.

Per ogni esecuzione sarà dato il nome del test case di riferimento: in alcuni casi si è riscontrata una failure e in seguito, attraverso l’opportuna correzione si è rieseguito il test case interessato, ottenendo esito positivo.

Alla fine del documento è presente una breve sintesi dei test eseguiti e la percentuale di risultati ottenuti.

Durante l'esecuzione dei test case riguardanti il reset della password si è verificata una failure nel TC\_GM\_3.7 ovvero quando si tenta di inserire un indirizzo email di lunghezza superiore al consentito. La failure era dovuta ad un mancato controllo lato client sulla lunghezza dell'indirizzo email. La failure è stata corretta e il test case è stato rieseguito non riscontrando più la failure.

Durante l'esecuzione del test sono state riscontrate 3 failure, rispettivamente in TC\_GM\_5.10, TC\_GM\_5.15, TC\_GM\_5.17.

La failure in TC\_GM\_5.10 si verifica in quanto il datepicker corregge automaticamente l'input errato (11/lu/1967) inserendo al posto di "lu" il numero corrispondente al mese di Gennaio. In conclusione questo tipo di input non può essere inserito quindi non si avranno correzioni sul codice dovute a questa failure.

La failure in TC\_GM\_5.15 si verifica quando si tenta di inserire un indirizzo email con lunghezza superiore al consentito. L'errore è dovuto al fatto che nei controlli in javascript non viene effettuata la verifica sulla lunghezza della email. Eseguendo la correzione nel codice il test non ha più riportato la failure.

La failure in 'TC\_GM\_5.17' si verifica quando si tenta di inserire un indirizzo email già in uso da un altro utente. L'errore è dovuto ad un mancato controllo nella servlet. Eseguendo la correzione il test non ha più riportato la failure.

The top screenshot shows the execution of test suite TC\_GM\_10. It includes test cases TC\_GM\_10.4, TC\_GM\_10.5, TC\_GM\_10.6, and TC\_GM\_10.7. Test case TC\_GM\_10.6 is highlighted with a failure icon. The failure message is: "18 - x = verifyTextPresent('Il formato del nome non è valido', false) (1,061s)". The bottom screenshot shows the same test suite after a correction. It includes test cases TC\_GM\_10.8 and TC\_GM\_10.9. Test case TC\_GM\_10.9 is highlighted with a success icon. The failure message is: "18 - x = verifyTextPresent('Il formato del cognome non è valido', false) (0,650s)".

Le failure in TC\_GM\_10.6 e in TC\_GM\_10.9 si verificano in quanto è stato previsto un limite alla lunghezza dei campi "Nome" e "Cognome" del form di registrazione: per questo motivo, nonostante rispettivamente "Giuseppe Antonio Francesco Gianmarco" e "Russo Francesco Marcantonio Maria" superino la massima lunghezza consentita, i controlli html trancano la stringa fino all'ultimo carattere consentito e permettono che la registrazione del paziente vada a buon fine nonostante ci si aspetti un fallimento.

La correzione ha avuto successo, i test case sono stato ripetuti con successo.

Durante l'esecuzione dei test case riguardanti la modifica dell'account del paziente si è verificata una failure nel TC\_GA\_7.10 in quanto il datepicker corregge automaticamente l'input errato (11/lu/1967) inserendo al posto di "lu" il numero corrispondente al mese di Gennaio. In conclusione questo tipo di input non può essere inserito quindi non si avranno correzioni sul codice dovute a questa failure.
